Final Sort:
[Programming Language]:
        [Learn Javascript in 3 steps]
        [Introduction to Swift]
        [shell script makes your life easier]
[Algorithm]:
        [How to implement a binary tree]
        [How does the quick sort work]
        [The art of programming]
        [What is algorithm]
[OS]:
        [How to use linux]
        [Set up your first web server]
        [Introduction to Amazon Web Service]
[DataBase]:
        [How to link webpage and database]
        [Deploy your first database]
[Coding example]:
        [Simple Framework for a Web-base Tower Defense game]
        [How to implement a binary tree]
        [Build your first web game]
[Others]:
        [Why I choose C++]

Programming Language ,OS and Algorithm were selected by both participants to be the group name in the sorting. There were sub-category names raised by the participants, for example, OS tutorial, Server maintenance. I merged the sub-category into the parent category in my case.

Another issue I realized in the survey is that the participants do not like to put a single card in different categories (I did give them multiple cards for one item). So I choose to follow their scenario, removing duplicate items, and keep exactly one item in the most related category.

The participants left the orphan card on the side and did not give it a group name. I still insist to give it a group here but change the name from "My thoughts" to Others, since it's not unusual to have an "Other" section in a personal blog. I think the blog is where to show yourself, I can put everything about me in it, the "Other" section will be fine.
